This paper examines the causes of the steep decline in the US Birthrate since 2007. Firstly, the paper claims that certain demographic factors have contributed to the US birthrate decline since 2007. Secondly, the paper shows how other factors, such as economics or policy, do not exhibit dramatic change around the same time. Lastly, the paper shows strong evidence that the significant decrease in the US Birthrate during the post-2007 recession is related to the recent cohort of women.

1 Introduction

We need Figure 1, Figure 2 - A & B, Table 1, Figure 4, and Figure 5 to show the evidence for our claim.

You can and should cross-reference sections and sub-sections. For instance, Section 2 and Section 5.1.

2 Data

Our data is of penguins (Figure 1).

Talk more about it.

Also bills and their average (Figure 2). (You can change the height and width, but don't worry about doing that until you have finished every other aspect of the paper - Quarto will try to make it look nice and the defaults usually work.)

Talk way more about it.

*Code and data are available at: <https://github.com/UtopianYoungChung/Paper2.git>

Figure 1: Bills of penguins

Figure 2: More bills of penguins

3 Model

$$Pr(\theta|y) = \frac{Pr(y|\theta)Pr(\theta)}{Pr(y)} \quad (1)$$

Equation 1 seems useful, eh?

Here's a dumb example of how to use some references: In paper we run our analysis in R (R Core Team 2020). We also use the `tidyverse` which was written by Wickham et al. (2019) If we were interested in baseball data then Friendly et al. (2020) could be useful.

We can use maths by including latex between dollar signs, for instance θ .

5 Discussion

5.1 First discussion point

If my paper were 10 pages, then should be at least 2.5 pages. The discussion is a chance to show off what you know and what you learnt from all this.

5.2 Second discussion point

5.3 Third discussion point

5.4 Weaknesses and next steps

Weaknesses and next steps should also be included.

Appendix

A Additional details
